

ATL BANTAM™ Bladders

Super Light Racing Fuel Cell Bladders FT3

Ultra-Thin, Feather Light, Maximum Flexibility Bladders

ATL is proud to introduce its all-new BANTAM™ Safety Fuel Cell Bladder, a super-light, ultra-thin yet very tough product. ATL BANTAM™ fuel bladders are constructed from a special weave of Kevlar aramid fabric, resulting in a weight saving of over 50%!

ATL BANTAM™ bladders are a mere .025" thick (25/1000 inch) yet they exceed all FIA FT3 specs and carry a full FIA approval for crash resistance and explosion suppression.

Super-light, ultra-thin and pliable, ATL BANTAM™ bladders allow for greater fuel capacity within the same size container, plus they trim precious pounds from your race car! And, BANTAM™ bladders are easier to install through small access openings and into tight cavities.

ATL BANTAM™ bladders are perfect for long distance races when maximum fuel and minimum weight are critical factors. And, BANTAM™ bladders handle leaded gas, unleaded with MTBE and high aromatics too.

Call ATL today for more information on the new BANTAM™ Racing Fuel Cell Bladder!

Most BANTAM™ Bladders are custom made to fit a specific tank or chassis, but ATL offers standard "box" shape BANTAMS too:

BANTAM™ Bladder, Foam & Nut-Ring
