

**YOUR ATTENTION PLEASE**

## **AQUA-FLEX™**

AQUA-FLEX tanks are low cost, light-weight and very weather resistant.

HOWEVER they DO require reasonable care and handling to avoid unnecessary stresses:

- A. Set up your Aqua-Flex ONLY on FLAT, NON-ABRASIVE surfaces to prevent rolling or chafing.
- B. Open fill-valve SLOWLY so as not to subject the fill/discharge connection to hydraulic surge or hose “whipping”.
- C. Do NOT overfill!! Watch for the RED “STOP-FILL” placard to pop up and STOP filling immediately. If water spills out of the open vent, you have OVERFILLED. Drain down until spillage stops.
- D. Do NOT use the fill/discharge connection as a pull handle, and do NOT let it support the full weight or tension of the valve and fill hose assembly.
- E. EMPTY your Aqua-Flex COMPLETELY before re-folding. Clean the exterior of debris and fold the tank neatly until its next use.
- F. Pin hole leaks CAN develop in real-world use. Usually they are negligible, but repair patches are quick and easy.
- G. With sensible care and reasonable handling, your inexpensive Aqua-Flex will provide many seasons of faithful service.

**THANK YOU FOR YOUR PURCHASE**

The logo for ATL, consisting of the letters 'ATL' in a bold, italicized, sans-serif font. The 'A' and 'T' are connected at the top, and the 'L' has a distinctive shape with a horizontal bar. A registered trademark symbol (®) is located to the right of the 'L'.
