

NEWS RELEASE:

ATL BALLISTICOAT™ FUEL TANK ARMOR CONVERSION

ATL (Aero Tec Laboratories, Inc.), world leader in fuel tank safety, presents its updated and automated **BallistiCoat™** self-sealing process for gasoline and diesel fuel tanks. ATL's impressive client list includes; the White House, Secret Service, CIA, FBI, Diplomatic Corps and an array of high profile private clientele.

BallistiCoat™ fuel tank armoring combines a sprayed up, multi-ply, rubberized outer envelope and an inner safety foam matrix. This technology helps safeguard vehicle fuel tanks against AK-47, Uzi, M-16 and other automatic weapons, shrapnel and projectiles. By self-sealing the fuel tank's "wound", **BallistiCoat™** helps prevent fire and explosion, allowing the vehicle to escape an assault or other potentially immobilizing attack. A full **BallistiCoat™** fuel tank conversion is reasonably priced and takes approximately two weeks to complete.
