

## **NEWS RELEASE: ATL Produces Custom Fuel Bladders for New AmeriQuest Blimp**

Aero Tec Laboratories, Inc. (ATL) of Ramsey, New Jersey, USA has proudly produced non-exploding fuel cell bladder tanks for the latest AmeriQuest Blimp. The "AQ" blimp is a familiar sight to football and baseball fans in the USA at stadiums where NFL, Major League Baseball and college games are played.

As the oldest and largest manufacturer of crashworthy fuel cells in the world, ATL produces a wide array of safety fuel bladders for aircraft, auto racing, marine, industrial and military applications. ATL was chosen by Airship Management Services of Elizabeth City, North Carolina to develop and produce this fuel system to Airship's specifications.

The AmeriQuest Blimp fuel bladder holds approximately 100 gallons of Avgas, and is constructed of ATL's puncture resistant nylon-reinforced elastomer. This safety tank also features reticulated foam baffling to mitigate fuel slosh and suppress explosion.
