

## **NEWS RELEASE:**

# **Security, Law Enforcement and Military Vehicles Use ATL's BallistiCoat™ Fuel Tanks**

Aero Tec Laboratories, Inc. (ATL) of Ramsey, N.J., is the world's leading developer and manufacturer of ballistic fuel tanks. ATL's BallistiCoat™ Fuel Tanks are self-sealing, self-healing and non-exploding.

ATL BallistiCoat™ Fuel Tanks are manufactured for vehicles used by the U.S. Military, U.S. Secret Service, C.I.A., and state and local Law Enforcement agencies. BallistiCoat™ Fuel Tanks have been used in all Presidential Limousines since 1975, and are now specified for Heads of State and Corporate Executives worldwide as well.

Working from stock OEM fuel tanks, ATL adds various levels of ballistic protection to help prevent fuel leaks, fires and explosions in armored cars, SUV's, limousines, combat vehicles, and police cruisers. The conversion process takes about two weeks.

Vehicle applications include Hummers, Suburbans, Toyota Land Cruisers and Tacomas, Ford Crown Victorias and Expeditions, Cadillac Limousines, Lincoln Town Cars, Mercedes-Benz S-Class, Mitsubishi Monteros, and other military, law enforcement, and diplomatic fleet vehicles.
