

## **NEWS RELEASE: ATL "PILLOW TANKS" (BLADDERS) PROVIDE INSTANT CHEMICAL STORAGE**

Aero Tec Laboratories, Inc. (ATL), leader in polymer composite technology, produces a wide variety of collapsible fabric storage tanks for the Paper Industry.

ATL's "Chem-Flex" is a fully collapsible fabric tank available in sizes from 100 gallons to 100,000 gallons. It is ideal for storing bulk latex or other chemicals used in paper mills.

These rubberized cloth "bladders" offer the broadest range of chemical resistance, so important for industrial applications and Haz-Mat operations. Chem-Flex bladders accommodate latex, alcohol, inorganic acids and alkalies, halogens, diesel fuel, water, oil, salts and even many organic solvents.

Toughness and durability, too, have been enhanced to surpass the U.S. military standards of Mil-T-52983. Superior tear resistance and puncture strength are provided by a high-tenacity nylon insert fabric. Abrasion resistance is improved as well by a double-layer coating of exterior rubber.

In addition to their superior weathering ability and compact volume, these ATL Chem-Flex tanks are remarkably inexpensive. Complete with flanges, fittings and handles, their costs are as low as 29 cents per gallon of capacity. Less even than most open-top bulk liners.
